

# Microwaveactivity from the island of Helgoland

## JO34WE

Rolf, DK2ZF, and myself will try to activate the rare square JO34 on 10- and perhaps also on 24 GHz. We plan to be QRV on 16<sup>th</sup> and 17<sup>th</sup> of june. Please observe the ON4KST- chat, we cannot make any skeds because if there are heavy storms the ferry to the island will be suspended. Our holiday home will be on the edge of the cliff about 30m above sea-level with good takeoff (at least I hope so) between 30 and 150 degrees azimuth. To make QSOs to other directions possible we will look for opportunities.

Let's cross the fingers for some propagations via rain- scatter!

Please send an e- mail with the QSO- datas and the mailing address to [dl6naa@t-online.de](mailto:dl6naa@t-online.de) to request a QSL- card for a complete contact.

We will confirm all finished QSOs directly, we don´t need cards from our partners.
