## Other repeater channels allocation on 70 cm band

### Introduction

In some countries of IARU Region 1, we do not have a full 70 cm band like in the majority of other countries (430 - 440 MHz); in particular in Italy we have only 430 - 434 MHz and also 435 - 438 MHz for Satellite use.

So there are real difficulties to put all repeater installations only on 430,025 MHz to 430,375 MHz (1,6 MHz shift).

### Proposal

Add a footnote on 4.5.2 chapter 430 - 440 MHz Band Plan Usage:

*In those countries that can't access the full 70 cm band, they can use these channel for their repeaters:*

#### *REPEATER INPUT*

*1,5 kHz spacing, 1,6 MHz shift  
(Channel frequencies 432,825 – 433,200 MHz)*

#### *REPEATER OUTPUT (region 1 system),*

*12,5 kHz spacing, 1,6 MHz shift  
(Channel frequencies 431,225 - 431,600 MHz)*

*If different or incompatible use of this part of the frequency spectrum is contemplated in neighbouring countries, this use should be coordinated between the countries concerned with the aim of avoiding harmful interference.*
